

SAFETYDOCS360

Reliance EHS

Steven Sladky, CSP

MISSION STATEMENT

Keep people safe
Projects on schedule
Operations compliant

Reliance EHS partners with biotech, pharmaceutical, and construction teams to strengthen safety programs, prevent injuries, and sustain environmental and regulatory compliance so every worker goes home healthy and every project meets its goals.

ABOUT US

Reliance EHS is a practical, field-focused health and safety consulting firm serving biotech, pharma, and construction operations. We combine deep industry experience with hands-on program design to simplify compliance, close training gaps, and turn safety data into actionable improvements.

We deliver measurable results thru program assessments, tailer training, site ready procedures, observation and corrective action systems, and audit ready documentation.

Our approach is collaborative: we work alongside crews, supervisors, and leadership to build solutions that fit real jobsite workflows and drive sustained adoption.

PROBLEM

PAPERWORK OVERLOAD

Multiple forms, documents, permits, and signatures are still being managed manually across the jobsite.

LOST OR OUTDATED DOCUMENTS

Crews need one current source of truth for plans, forms, permits, and safety documents.

TRAINING GAPS BETWEEN CREWS

Inconsistent training delivery and tracking creates readiness gaps across workers, trades, and crews.

SAFETY OBSERVATIONS GO NOWHERE

Observations are hard to close out, trend, and turn into leading indicators without one system.

REACTIVE INCIDENT RESPONSE

Teams often react after issues occur instead of using live data to prevent repeat problems earlier.

INCONSISTENT COMMUNICATION

Communication between GCs, subs, supervisors, and safety teams is hard to standardize and scale.

Dashboard Data Sources

Source arrows: each label explains where the dashboard information is

Connected modules

The six tiles are live counts from JSA, permit, incident, report, action, and jobsite tables.

Launch checklist

Go-live tasks are generated from auth, jobsites, team roles, and workflow setup.

Account profile

Company name, tenant, jobsites, and safety lead.

Workforce roster

Worker count comes from shell employees/user records.

Open action queues

Open items roll up from JSAs, field actions, permits, and jobsites.

SafePredict model

Average site risk is calculated from connected operating data.

Here's what's happening across your projects today.

AGENDA

What we'll be going over

A quick walkthrough of the platform, core workflows, business impact, tiers, and rollout plan.

1

Product overview

How SafetyDocs360 connects the daily operating view.

3

SOR / Field observations

Capture issues, prioritize follow-up, and spot trends earlier.

5

Compliance / Matrix

Make workforce readiness, credentials, and gaps visible.

7

Business impact & tiers

Show time saved, cost saved, risk reduction, and package options.

2

Documents / Builder

Create structured safety plans through guided workflows.

4

Compliance / Audits

Standardize audits, findings, evidence, and submissions.

6

Predictive model

Turn data into risk signals, priority themes, and actions.

8

Pilot path

Start small, prove value, then scale with confidence.

The goal: better visibility, faster decisions, cleaner compliance, and prevention before incidents happen.

Build safety plans with a guided workflow

The CSEP Builder helps teams choose the work, confirm sections, and move from setup to draft in one controlled process.

BUILDER WORKSPACE

Contractor Safety Plan (CSEP) Builder

Build the plan step by step. Start by choosing the work, confirm the sections, fill the project details, then generate and submit the draft.

Trade not set
27 sections
0 tasks
Reset builder

BUILDER STATUS 13%

Trade location: Not selected.

Step 3: Select Sections

Choose which sections should appear automatically based on the form.

APPLY ALL

CLEAR ALL

1. Program

Content (core content) elements always on

2. Scope of Work

Required for all projects and tied to trade/work area/task types

3. Site Data Details

Project location, address, notifications, and emergency contacts

4. Stakeholder and Coordination

HCS, SDS, labels, inventories, training, etc., and other relevant control

5. Hazardous Materials and (Operational Alert)

HCP, inventory, locations, inventories, and other relevant control

6. Training Preparedness (Operational Alert)

Training materials, notifications, and verification for workers and tasks

7. Training, Competency and Qualifications

Training matrix, qualifications, and verification for workers and tasks

8. PPE and Equipment

PPE assessment, selection, and use, and other relevant control

9. High-Risk Programs

Self-inspection, inspection, and other relevant control

10. Health and Hydration

Sanitation, hydration, and other relevant control

11. Incident Reporting and Investigation

Incident reporting, investigation, corrective actions, and learning

21. Program Oversight and Audits

Overnight, on-site, and other relevant control

22. Regulatory/Cycle References

Include required permits, licenses, and OSHA/OSHA references

23. Attention to Employees

Employee participation, communication, and feedback

24. Subcontractors, Service & Vendors, and Visitors

Control requirements, pre-qualification, and other relevant control

25. Environmental Controls and Spills

Waste management, spill prevention, and other relevant control

26. Wildlife Control & Off-Site (SMS/Musical Safety)

Wildlife plan, off-site control, and other relevant control

27. General Fire Protection/Control

Fire prevention, hot work permits, and other relevant control

28. Hazardous Materials Handling and Storage

Material handling, storage, and other relevant control

29. Hazardous Materials Disposal/Control

Material handling, disposal, and other relevant control

30. Demolition Control

Demolition plan, and other relevant control

31. Construction Improvements

Material, trends, lessons learned, and other relevant control

Guided steps

Move through the builder in a clear sequence instead of piecing the document together manually.

Section control

Choose the sections that apply so the final plan reflects the actual scope of work.

Standardized output

Keep the structure and expectations consistent across projects, trades, and teams.

Draft-ready workflow

Build a strong first draft that is easier to review, refine, and finalize.

Spend less time building documents and get professional, consistent safety plans out faster.

SOR / FIELD OBSERVATIONS

Recent reports and priority signals make follow-up easier to manage

Review the queue, understand priority, and close what matters first.

Board

Analytics & trends

Use **Board** to triage and update observations. Use **Analytics & trends** for charts, repeat patterns, and the analytics matrix (shareable via the `tab` query in the URL).

OPEN ITEMS

0

Issues that need assignment or immediate action

IN PROGRESS

0

Issues actively being worked in the field

OVERDUE

Sidebar Data Sources

These arrows explain what feeds the navigation summary.

Current route

Navigation state: user is on the dashboard view.

Predictive risk module

This tab opens the forecast, drivers, and heat map views.

Risk model output

Score 56/100 is generated from training, permits, incidents, JSAs, and actions.

Jobsite heat map

Drilldown uses jobsite/location risk scoring from the same model.

Worker Readiness and Prevention Sources

Source arrows: each label explains where the dashboard information is pulled from.

Roster + training status
Donut combines worker directory with training due/completion records.

AI risk analysis
Insight is generated from training gaps, permit gaps, and workforce exposure.

Predictive model
Risk impact and incident likelihood are model outputs from the connected data.

Action queues
Next steps come from overdue training, expiring permits, and planning tasks.

Worker Readiness by Status

Compliant	312 (78%)
Expiring Soon	60 (15%)
Overdue	28 (7%)

220
Total Workers

Compliant

Expiring Soon

Overdue

Prevention Insights

Our AI model analyzes training, permit, and workforce data to predict risk and prevent incidents.

28 workers have overdue training and/or permit gaps across 3 high-risk activities.

Predicted Risk Impact

High Up 22%

Potential Incident Likelihood

Elevated Up 18%

[View full predictive analysis →](#)

Recommended Next Steps

Address 28 overdue training items

Focus on LOTO and Fall Protection.

Renew 11 expiring permits

Confined Space and Hot Work expiring soon.

Schedule refresher training

First Aid and HazCom for 63 workers.

Reinforce pre-task planning

Include permit and training verification.

[View all actions →](#)

Training and Permit Data Sources

Source arrows: each label explains where the dashboard information is pulled from.

Workforce roster

Team/trade and worker counts come from worker directory records.

Training LMS/status

Green, orange, and red icons come from completion and due-date records.

Permit log

Active, expiring, and expired counts come from permit records and dates.

Permit detail view

View all permits opens the underlying list behind the summary.

Training & Compliance Matrix ⓘ

Team / Trade	Workers	Fall Protection	Confined Space	LOTO	HazCom	First Aid
 Electrical	48					
 Mechanical	52					
 Civil / Concrete	38					
 Welding	26					
 Equipment Ops	34					
 Scaffolding	22					

 Compliant  Expiring (<= 30 days)  Overdue (> 30 days)

Required Permits ⓘ

[View all permits →](#)

Permit Type	Active	Expiring Soon	Expired
 Hot Work	12	3	1
 Confined Space Entry	8	2	0
 Excavation	6	1	1
 Electrical Work	7	2	0
 Work at Height	9	3	0
Total	42	11	2

Predictive Risk Forecast Sources

Source arrows: each label explains where the dashboard information is pulled from.

SafePredict forecast
Trend line is calculated from recent activity and connected safety records.

Schedule/activity signal
Peak window reflects planned high-risk work and site activity.

Model confidence
Confidence comes from data volume, freshness, and signal consistency.

Driver rollup
Driver list is ranked from observations, housekeeping, electrical work, and missed

Next 30 Days Risk Forecast ⓘ

FORECAST SUMMARY
Risk is expected to peak between May 20 - May 23 due to increased work at height activities and higher site activity. Proactive actions now can help prevent incidents.

MODEL CONFIDENCE
87%
High Confidence

Top Drivers of Risk ⓘ

- Fall Protection Issues**
Recent increase in fall protection observations and near misses.

HIGH IMPACT
● ● ● ● ●
- Housekeeping**
Frequent housekeeping issues in work areas.

HIGH IMPACT
● ● ● ● ●
- Electrical Exposure**
More exposed electrical tasks planned and in progress.

MODERATE IMPACT
● ● ● ● ●
- Missed Training**
Increase in overdue training for critical topics.

MODERATE IMPACT
● ● ● ● ●

[View all risk drivers →](#)

Forecasted risk comes from planned work; daily JSAs confirm actual work. The system looks ahead using the project schedule, upcoming permits, crew assignments, jobsite activity, and historical patterns. Daily JSAs then validate the task, crew, hazards, and controls once work begins.

Recommended Action Sources

Source arrows: each label explains where the dashboard information is pulled from.

Risk driver engine
Cards are created from top model drivers and open safety gaps.

Observation/JSA data
Fall protection and housekeeping come from field observations and JSA review.

Electrical exposure
Electrical action is sourced from JSA tasks and LOTO/barricade needs.

Training records
Training gap action comes from overdue worker training status.

Recommended Actions ⓘ

Actions you can take now to reduce risk and prevent incidents.

Reinforce Fall Protection
Conduct toolbox talks and verify fall protection usage this week.

HIGH PRIORITY

→

Improve Housekeeping
Assign daily housekeeping ownership and increase site walkthroughs.

HIGH PRIORITY

→

Control Electrical Exposure
Review JSA's and ensure proper barricades and LOTO where needed.

MEDIUM PRIORITY

→

Close Training Gaps
Schedule and complete overdue training for at-risk workers.

MEDIUM PRIORITY

→

BUSINESS IMPACT

Predict risk sooner, save money, and prevent costly incidents.

SafetyDocs360 turns work activity, training, permits, observations, and reports into early risk signals and focused actions that protect margin.

Predict sooner

Forecast high-risk work before incidents with driver rollups and early warnings from live jobsite data.

Money saved

Reduce rework, admin drag, and hidden costs from missed follow-up, expiring permits, and delayed action.

Prevent losses

Turn predictions into prioritized tasks so teams close gaps early and avoid costly incident disruptions.

Predict risk earlier. Save money by preventing problems before they become incidents.

PLATFORM TIERS

Flexible tiers designed to grow with your operation

Start with the core tools your team needs, then expand into compliance, document workflows, and predictive insights as your program matures.

Essentials

For teams getting the basics organized

- ✓ JSAs and permits
- ✓ SOR / field observations
- ✓ Audits and inspections
- ✓ Incident reporting
- ✓ Basic dashboards

Professional

For stronger compliance visibility

- ✓ Everything in Essentials
- ✓ Compliance matrix
- ✓ Credential and training tracking
- ✓ Submission workflows
- ✓ Review visibility

Advanced

For document-heavy operations

- ✓ Everything in Professional
- ✓ Safety document builders
- ✓ CSEP / SSP workflows
- ✓ Document exports
- ✓ Admin review queue

Enterprise

For multi-site scale and AI insights

- ✓ Everything in Advanced
- ✓ Predictive model
- ✓ Trend analytics
- ✓ Multi-jobsite visibility
- ✓ Admin controls and support

Optional add-ons

Implementation & setup

Document review

Custom templates

Training support

Choose the level that fits today — and add capability as your team, jobsites, and data grow.

IMPLEMENTATION PATH

Start with a pilot, then scale

A smaller rollout proves workflow fit, time saved, approval speed, readiness gains, and risk reduction before a broader launch.

Pilot structure

Pick 1–2 jobsites, confirm document scope, and configure the initial workflows, permissions, compliance views, and training/readiness tracking.

What to prove

Show time saved, cleaner approval routing, faster access to current records, stronger readiness tracking, better follow-up visibility, and earlier risk reduction through predictive tools and preventive measures.

What happens next

If the pilot performs well, expand by jobsite, worker count, and governance level into the right commercial tier for the operation.

Prove the value in a focused rollout first – then scale with confidence.

Thank you

Ready to modernize safety documentation and field visibility with a cleaner operating model?
